NRS ZIP TECH AND ZIP CARE

Lubricates, cleans, and protects watertight and airtight zippers. These products may be used on coil, plastic, or metal zippers.

Preparation:

Pre-clean with Zip Care applicator brush to remove all debris from zipper teeth.

Application:

1. Open zipper and apply Zip Tech sparingly **ONLY TO THE OUTER TEETH OF THE ZIPPER.**
2. Open and close the zipper carefully to evenly coat the teeth.
3. Repeat this process until the zipper moves over the teeth freely.
4. Wipe away excess with cloth.

Note: For prolonged storage of dry suits and dry tops store with zipper all the way open, even the relief zipper. If left closed for long periods, the zipper's sealing elements can take on a "compression set" making them less effective.
